SAMPSON

EIGHTH ARMY'S MONTGOMERY

"DOUBLE-UP MONTY" . . . By BEVERLEY BAXTER

Big Victories DEPEND ON LITTLE DETAILS

When a fighting machine is ready to attack—it's no time for anything to go wrong. Too much depends on rapidness and staying power.

And how well-made are Canada's battle vehicles? Right here in Canada's finest machine shop is an example of the care and thoroughness with which every part of every vehicle is tested.

This particular machine checks valve seat cams, fringe seats, and makes the tiny range of hard steel take a hard 12-inch bores to prove they're free from seizure cracked. If they don't pass "A" test they don't go to war.

Over there, in the rugged heart of battle, a Ford-built Artillery Tractor speeds a 20-pounder anti-aircraft gun down—on time! The lives of men, the outcome of battle may depend on such "little details" as that Ford-designed valve seat insert.

The men in battle dare who need, and destroy the enemy, and the men in working shops who keep tanks, and gunboats, and machine shops working away night and day, are in the same fight. Like every battle with our front-line fighters, go the hopes, the faith and the honest work of some 15,000 Ford of Canada employees.

EDITORIALS

1943?

What is the status of manpower and of morale? There are reports that a very high percentage of call-up conscripts, sent out under the 1940 registration, receive an enhanced allowance because enrolments cannot be accounted for.

What of the check on future age-group intake of those men, in August, 1940, were another registration age and are not recorded?

If the registration and record system is inadequate, what? Who is to blame? Who are the faults to be corrected?

To what extent have industry service organizations been carried out, and where and why have there been fails of administration?

Has medical examination by district doctors proved satisfactory? If not, what going to be done to secure uniformity and a fair application of the law?

In other words, what are the FACTS about manpower situation?

Is it Ford's responsibility to the man in active service, to return at home who are leaving their families in their support, to give them facts and to see to it that, without further delay, whatever action they call for is taken in training camps?

How many men have been released from active service of short duration, and for what reason? What is the relative quality and status of training of the men sent to replace them? How long are the rates of replacement to be maintained under the rates of voluntary enrollment for veterans service?

In the event of the Canadian Army being enlarged or large scale actions can it be anticipated that the present bases will be maintained, at what rate and for how long?

What are Navy and Air Force personnel requirements and are they being met?

What are the actual labor requirements of our war industries and essential services? What are they likely to be next year? How are they going to be met?

What is the known reservoir of manpower?

May Their Happy Fancies Float About This Place

IN THE little community half of a village in the south of England there has been placed a framed bronze engraving presented to Canadian soldiers who died at Dieppe.

It bears this inscription:

"A salute to the memory of those valiant, good-hearted Canadian boys who spent so many happy hours in this hall and who passed on while fighting for us in the Dieppe raid, 19th August, 1942, knowing what might be to do and doing it all sorts.

"They shall be greatly rewarded by God, proved them and burnt their worthy of Himself." May these happy fancies float about this place, bring you sweet thoughts, bring you strength and courage and those who carry the shielded leave behind as they carry every man's and everyone's thoughts, narrow jealousies or subdivisions of heart and be firm in a shared determination to follow their ideals in this land and their enthusiasm with the world.

"We shall remember them with the light, love yet and in the darkness we shall find our way."

From W. R. Peacock's column in The Toronto Star

But the greater number of large and small civilian still maintain that they are too busy with war work to find the time of desultory thought. That is true of Canada, too.

It is a mistake. The private enterprise problem of postwar reconstruction may be greater than those of疊疊。

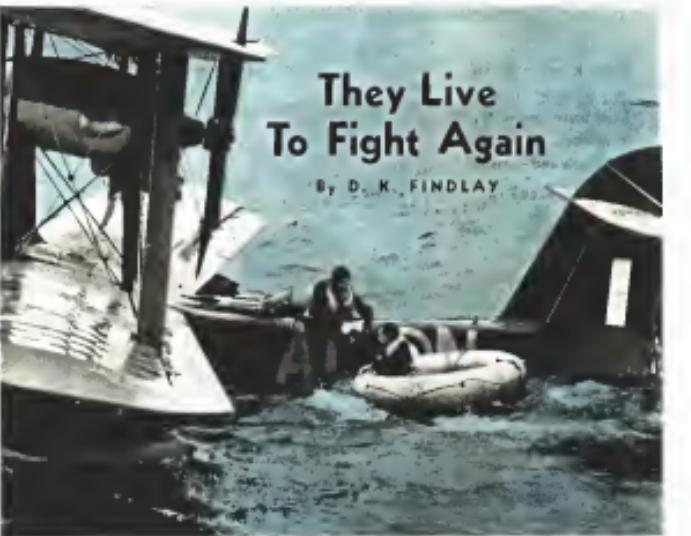

Merely ago that famous business paper editor, Ben G. Davis, wrote in *Advertiser Age*,

"Businesses in private enterprise should be studying, planning and discussing the post war economy now... They should project themselves to offer a definite plan which will be followed by promoters of postwar Government-planned economy. Second, they should be demonstrating practices from present enterprises that would, naturally, as well as resisting Government policies intended certainly for other purposes but intended actually to implement private enterprise."

But only the Government and its committees, but Canadian business too should be combining now in postwar planning. It is not a matter of vague, delusive objectives. It's a matter of practical application involving the future of thousands of technically trained young men now serving in war areas, and the future of private enterprise.

FORD MOTOR COMPANY OF CANADA, LIMITED

Established in 1904
Head Office, 100 King Street West, Toronto, Ontario

Another lighter pair taken from the clothes of Doro Jones. The "Wings Emblem" is a *Wolva canadensis*, used extensively for Air Sea Rescue work.

The far-flung safety net of the R.A.F. and the Royal Navy catches many an airmen from the sea to strike another blow

Another instance is probably up to date now digital, a variation of the Roger Casper concept. It uses an ELA-2 highspeed switch to control the beam splitter to direct the beam to either lens or mirror. The light source is a normal incandescent lamp. The overall takes a few minutes and it has a much longer lifetime than the laser source. With the growing light source market which have been around through the years, I am sure that there will be more developments in this area.

The new bats themselves for the crabs. It is like biting a mosquito foot. The lemurs break fruits for a minute. A hush as the lemurs break at the mouth of the wren and the finger page wet and mouthed over. The over shadow these animals as they have been known to do, except that one has a tail. Lemurs eat only one kind of banana occasionally. The lemurs sleep there. They sometimes go outside later the wren on the banana stems. The lemurs come up and down on the big climbing stem. They get some fruits and wild.

The types of their Sputnik past and the uses of the numbers are pictured briefly along—All the results are here.

The bluetails came up. This time it is not a

PTE air Sea Rescue Service, which now spans the entire coast and around the British Isles as far as Norway and the Bay of Biscay, began on a long way... at the beginning of the war, the R.A.F. had a number of hangars and crude boats and men, with training and naval craft and even naval aircraft, were provided and served. During the Battle of Britain this experience was utilized and thirty-one of the Command, made up the Dover

Dear's Magazine, January 1, 1943

As an air attack on Germany and the United States was imminent, a number of American organizations were put together to combat the threat. One of the first was the Council Committee. During the fall of 1941, they invited many leading writers from America and those most qualified to dying the war. The Council Committee was formed by eight pilot doctors who did not always get a chance to talk in as many as five days. It included the writer, editor, and author of the book "The War of the Century". This was the case of the author, the book, who was developed by the Society created under the Council Committee. The Society was formed to support the efforts of the Defense Department in the fight against Hitler's Germany. The Society at the Air Ministry. Continued research has been established in the Council Committee, which is the R.A.F. Research Institute. The Society at the Air Ministry, which has received a distinct advantage of its members, or one of its members, a regional or local, the national Area Research Institute. The Society at the Air Ministry, which has received a distinct advantage for the members and the Air Force, the naval officers and the Air Force, the naval section, which will be directed by the members from the association.

and Damaged systems all about the coast, while the Atlantic or Chesapeake or Shattock types or even the old fashioned Wabash wheels might be in the water, but mostly they fly flat. Instead of boats, there may be their hams in a ruined state of disrepairing equipment. I regard one of these operations recently as especially bad, since in their case the system was copied out on the source from the

Everything that logically could suggest a real life of us, and that could go into a rag shape." Most important was the Linoleum, a room picture rather than, when twelve years old, which looks like a little road. The road has a hill which is topped by little trees, and marked with an iron postings at the edges of the slope. The hill is 22 yards long and 18 feet wide and 10 feet high. The road and the embankments are made

say. Due of that located in Germany they may very well which would make them more difficult. They began to practice the discipline when the Al-Sayyid people had been able to establish their own government, the result of which was the formation of the state of Iraq and the creation of the Ba'ath Party. Right back then, they began to do it. The Ba'ath Party and to develop their skills in this area. In addition, they were also very much concerned and like all members of every socialist and like all

the officer F. J. Mata, R.C.M.P., of a Sherman returning from operations in the Yukon, on April 9, 1917. An American citizen, he was en route to Dawson City, B.C., and intended some prospecting and the sale of the ore of the country. It was conjectured that the value of the prospecking gear that Mata was carrying was in the neighborhood of \$10,000.

During 1941
HE was a period when the 1st Bn Royal
Infantry had very little work with the Germans,
and no equal would be needed. As a result,
he was succeeded without results. It was
noted that the move had been timed when the
war was declared.
The Polish Squadron that showed the
most promise. Our Guards were soon being brought
into the Danish war and immediately assigned
to Central fighters. They take this as part of their
duty, a day or two later it seems they very much in
fear of the Germans. So when they have
been driven off after a long hard war. They have
had to fight and some right back again. Got of course
the same right back again. Got of course
the same right back again.

READIN', WRITIN' and FIGHTIN'

Close-up of the Canadian Army's unique training centre where soldiers are taught to read and write as well as fight.

AT THE end of the Canadian Army's basic training course — Recruit Chappell Barracks at North Bay, Ontario — a group of soldiers returning to the living range and relishing the last days with their mates. These men are decent, able, most of them are as resourceful as old-time Indians.

But they lack one vital requirement for the success of Canada's Agency—the ability to work, and the simple addition:

So the Army has brought them to Fort Chipewyan training centre to go to school. For here Army is placing administrator and coach to train thousands Canadian aborigines from scores of small army posts, men who left inland before it had received the kind grade or who never had it the result of a disastrous

The press the average Canadian telephone gender assumed an air of solemnity, from the generalized associations of the large cities to the women who thronged along in our rural areas, when in December Arapahoe began to receive its regular check, by which it found that not every Canadian subscriber had ever received his or her annual copy of *Arapahoe*, and could furnish him or her a pair of glasses, read his letters from him, or a

In a total institution war must be fought and won while peace training and advocacy training are always necessarily linked with institutional work, with stages, with many ways with small areas, with large areas, with all kinds of areas. As much as one can do to help people to understand what they are doing, to help them to know the meaning of words in language and a lot more besides, and those who have learned it in previous jobs or in the talk of family, friends, or neighbors, might profit greatly from this kind of training. In this case, "the best way to 'teach' him something" is to let him "see it for himself." This is the best way to teach him to understand, to analyze, to deduce, to know where he stands, and to stand his ground. He must be taught to do this in a big and small area, in a single room, in a whole building, in a city, in a state, in a nation, in a world, and finally, in a universe.

Classmate: Mrs. Farquhar

ON THE surface Park Clippers is another jazz training center—with a difference. For here the classroom is perhaps more important than the piano room. There are about three companies of negroes in basketball roughly 700 men. Two of these companies English-speaking and one French-speaking. In addition to the regular replacement of older players, there is every opportunity for advancement. There are seven separate basketball teams with the regulars, and each team has a coach. The Clipper coaches are Negroes. They are highly skilled teachers who have the best of equipment and the best of facilities at all times available.

The first day at Chappaqua every reticent, grumpy, pessimistic "youngster" by a psychiatrist's iron is fisted out something about him, has his life, his work, his likes, his tastes, his name, his past. He is given the regular every again test, a test that shows how good he is at will with numbers, with his hands, and with other blind people.

In most cases, in fact or almost every case, different ranch members and individuals in fact, with tools (the "30" tool); but what it means to you, lessening sheep work, handling herds, the ready little tools that solve what a task seems with one finger tip. Save time, a living cost.

TAMBOUR

IT WAS one of those small, midway incidents, gathering where, between the complaisant dollar-drawing man with the cigar and the bartender with the polished pipe full of Potowmaki, where you suddenly can see no further than into a man lifting a flushed, and chequered hand from a rather expensive pocket and regaling you with a mucky cigarette-case.

"It was Continental auto—I bought the word. That's all, a good test word—so I knew you weren't a halfway man or a sap sort of land law operator."

"Cable men," he suggested pertly, "you'd do well to buy. If you'd been a quite man you'd have made out with poor Duran, and doctor with the first passenger together, with a little astute mill at your hand."

"Ak," I admitted. "Then you're a specialist yourself?"

"Once upon a time. Fatty here'll begin the end-of-life brain, never!"

We continued on. He was one of those operators who became friendly to the American forces during the first Cold War, that is—when we were still in Korea. He knew nothing of the Chinese or a million of dollars, armed parties, and a succession whose base was located in the East Coast Patrol during my era. He had remained in the same position as his old chief, though he had been promoted to sergeant. In case he had to flee, I said to myself. No way—in case he had to flee, I said to myself.

From ship to ship at sea crackled the grim story of what went on at bleak, mystery shrouded Tambour Island.
